What is the problem ?

- As a new business unit in India, you're developing innovative products/features.
- You want informed decisions because understanding your competitors' performance is crucial.

The GOLDMINE

- Online conversations are a goldmine of competitive intelligence.
- Up to 85% in potential sales growth compared to data-savvy competitors
- 4-8% revenue boost from enhanced customer experience insights
- 25-95% higher profits from just a 5% increase in customer retention
- Nearly \$200 billion in yearly losses for retail businesses — due to bad reviews

89 million

Small to medium sized enterprises
(SME's) in developing countries

Journal of third world economics - 2023

~66%

Of the planet has access to the
internet

Forbes - 2024

85%

Of SME's say that online customer
feedback has been
beneficial to their business.

Barclays - 2023

How can they best take advantage?

The Solution

- Capture real-time market sentiment
- Identify emerging trends and unmet needs
- Analyze competitor strengths and weaknesses
- Inform product development and marketing strategies

You could use:

Hubspot

- Costly
- Need to buy into their ecosystem

Qualtrics

- Can only monitor through surveys
- Less accessible

Sprout Social

- Unintuitive
- Limited Languages

Or you
could use...

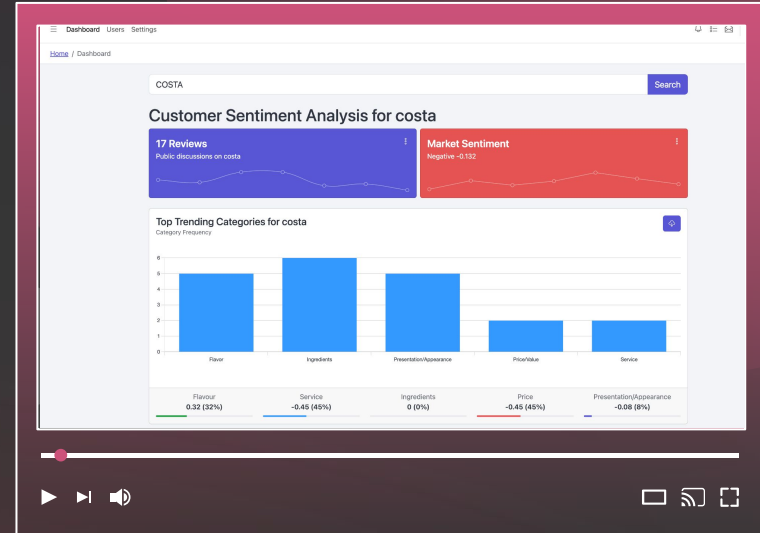

Agent Apollo

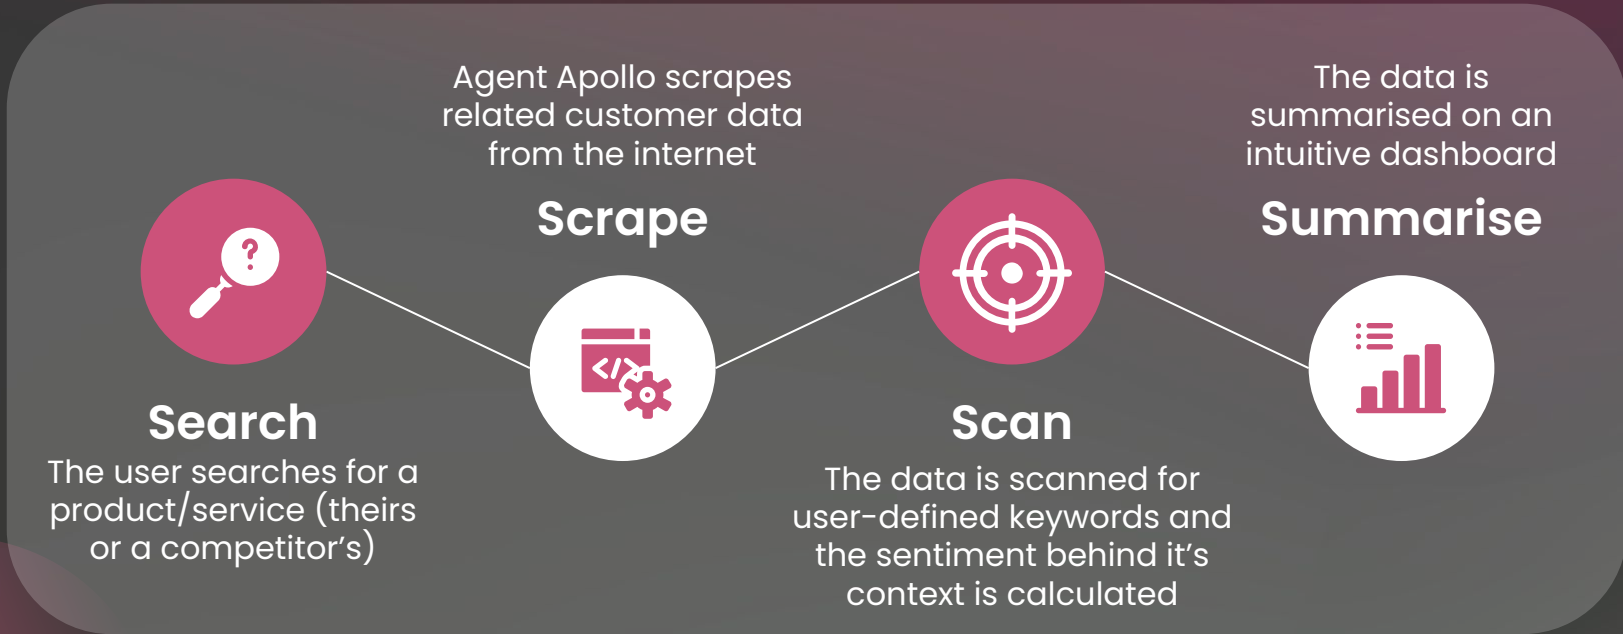

Stay in the know

What is it?

- A powerful yet user-friendly customer sentiment analysis tool
- Designed to transform how businesses understand their market position.

How does it work?

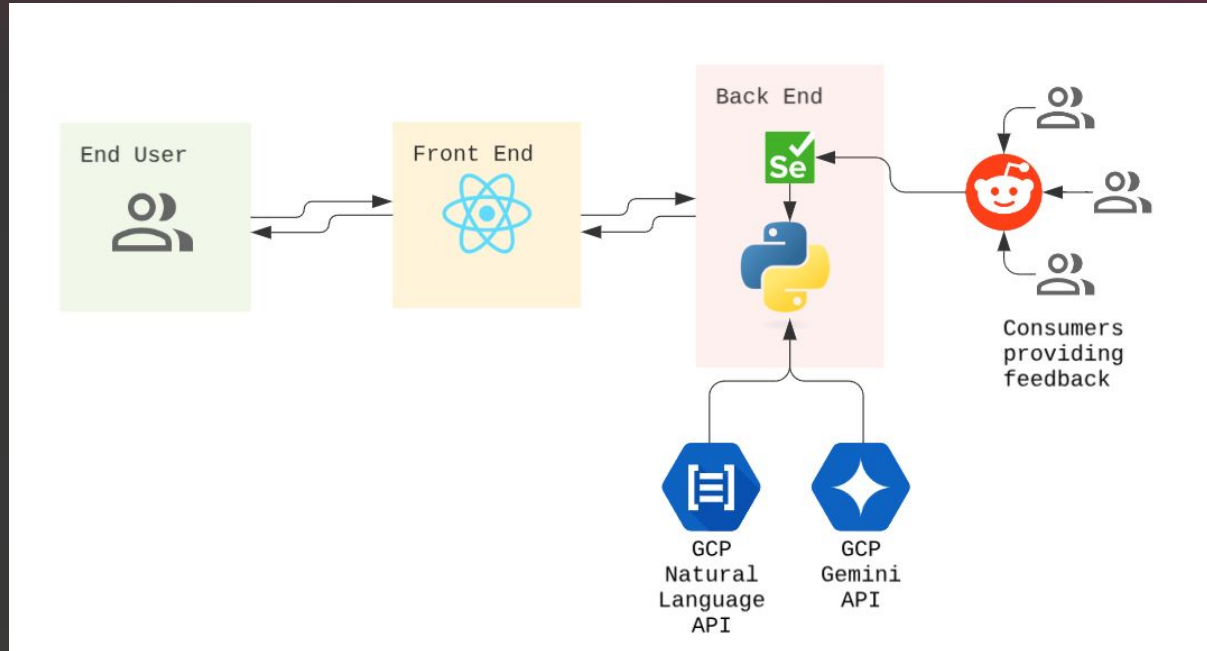

Talk to Apollo!

Data collected is sent to Apollo, a Gemini based chatbot that can provide advice based on your metrics, making it more accessible for those with less digital literacy, or for those in which the source material isn't their native languages, since Gemini is available in many different languages

(demo here)

System Design

Alignment with NBU Initiative

Our product is cheaper than the competition, making it more accessible to companies in proximity with the NBU

Language localisation and intuitive use through Apollo LLM also aids accessibility

Simple and minimal dashboard for those with less digital literacy

NBU Business Impact

- Rapid Market Intelligence
- Competitive Edge
- Proactive Issue Management
- Product Development Guidance
- Marketing Optimization

Our plans

Basic

Everything you need to get started. Best for getting off the ground

- Standard Research
- Apollo LLM Access

€0

Pro

For more established organisations.

- Limited email Alerts
- Advanced research

€10

Premium

For power-users and paid researchers

- Weekly newsletter
- Real time alerts
- Helpdesk priority

€15

Potential Enhancements

Some changes we would have made given more time:

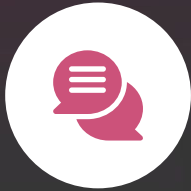

Robust Classification

Use GCP's `analyseEntities()` method to find the subjects of each sentence, then use a Text Vectorisation algorithm to check their relation user-defined keywords for more robust topic classification

Better Search

Implement search support for brand names and unique product names

Long-Term Expansion

Research

Expand our input analysis to include a multitude of recognised social media platforms like Twitter,

Stocks

With the stock market on the rise, there is inclination to receive general sentiment around specified stocks

Newsletter

Weekly Newsletter to help businesses stay out in front of growing trends and potentially reflect this in their business model.

In conclusion

Agent Apollo helps NBU-focused businesses by providing valuable insights from online communities in emerging markets, allowing them to better understand the preferences, challenges, and needs of new internet users.

By gathering and analyzing real-time feedback on topics like product usability, affordability, and digital accessibility, companies can make informed decisions to tailor their offerings, improve user experiences, and drive digital inclusion.

Ultimately, the project empowers businesses to create more relevant, user-centric products and services for the next billion users.

Thanks!
